

ABSTRACT OF THE DISCLOSURE

The simulation method of the present invention for simulating a system
5 having a plurality of circuit modules using software, comprises the steps of:
using an object oriented language; preparing a plurality of circuit base
classes, which describe base circuit modules as classes, as a library;
describing the circuit modules, to be simulated, as classes by inheriting the
circuit base classes prepared as the library; and describing the system, to be
10 simulated, by combining the circuit modules described as the classes.
